Spin-1 correlations on periodic 3D boxes — no bulk ξ extracted
Separation along the spin's coordinate line
Separation perpendicular to that line
⟨S_i · S_{i+r}⟩
Distance r (cubic-centre spacings)
4³ (192 spins), run A
4³ (192 spins), run B
6³ (648 spins), run A
6³ (648 spins), enhanced sampling
Both sampling methods target the same quantum state. Bars: statistical errors only; size and mixing errors remain.
