A short fit can miss the tail
Local effective decay length (cells)
Distance (unit cells)
x translation
y translation
x approaches ≈0.638 in the resolved window;
y has not settled before numerical noise.
Kagome cylinders: keep the sector fixed
Bond-coupled transfer length (axial cells)
Circumference (unit cells)
even virtual parity
odd virtual parity
Exact contractions of finite cylinders;
these widths do not determine the plane limit.
